### Introduction:

The Evaluative Report illustrates the important changes in attitudes, behaviors and beliefs exhibited through strategic comparison of Survey 1, Survey 2 and Survey 3 data. It is important to note that this report tracks student responses to matched questions throughout the survey process, and reports data only on students who have completed all three surveys.

### AlcoholEdu for College Pre-matriculation Design:

Students complete Survey 1 and Survey 2, alongside the Pre-Test and the Exam, during the summer before arriving on campus, and Survey 3 during the fall semester.

#### Survey 1

Students complete this 26-question survey <u>before</u> they begin the course. It assesses drinking behavior, consumption patterns and attitudes about drinking including perceptions of campus norms. It also collects important demographic information on each of the participants.

### Survey 2

Students take this 27-question survey <u>after</u> they complete the course but before they receive their Final Exam grade. This survey revisits each student's expectations, attitudes and opinions about drinking. It asks students to evaluate AlcoholEdu as a learning tool and assesses student's beliefs about how much knowledge they have gained.

### Survey 3

This 18-question survey is presented to students from <u>30-90 days after</u> they have completed the course. This survey asks students many of the same behavior, consumption and attitude questions found on Survey 1, thereby allowing changes to be assessed. Other areas of inquiry include whether the student has thought about the material since taking AlcoholEdu and how the course content may have affected his or her choices about drinking.
