1. **Overview Statement:** Briefly summarize the assessment activities that were undertaken this academic year, indicating:

   a. **Which program learning outcomes were assessed this year.**

   1A) Describe, synthesize and apply concepts & techniques in the current literature within a specific research area.
   1B) Ask scientific questions based upon the literature and construct research hypotheses and design experiments to test hypotheses.

   2A) Select and meet with graduate committee members. 2B) Conduct original research, demonstrating research skills within the specified research area and evaluate collected data.

   3) Prepare a written thesis to be reviewed and accepted by the graduate committee. The thesis will consist of the following sections: Introduction, Materials and Methods, Results, Discussion and References.

   4) Present findings in a public format accepted by the graduate committee members.

   b. **Who in your department/program was involved in the assessment of the above learning outcomes.**

   Jennifer Dever, Chair of graduate program and Thesis Advisor for graduate student [redacted]

   Christina Tzagarakis-Foster, Thesis Advisor for graduate students [redacted]

   Juliet Spencer, Thesis Advisor for graduate student [redacted]

2. **Please Answers the Following Questions for Each of the Student Outcomes Assessed:**

   a. **What did you do?**

   Describe clearly and concisely how you assessed the learning outcomes that were evaluated this year (e.g., measures, research methods, etc.). [please use bullet points to answer this question]

   There were six students enrolled in our program this year: four first year students ([redacted]) and two second year students ([redacted]). To assess learning outcomes for these students the following assessment tools for each outcome were employed:

   Outcome #1 [1A) Describe, synthesize and apply concepts & techniques in the current literature within a specific research area. 1B) Ask scientific questions based upon the literature and construct research hypotheses and design experiments to test hypotheses.]

   Assessment tools for this outcome
   - Directed Reading (BIOL 695)
   - Seminar (BIOL 600)
The first-year students enrolled in BIOL 600 and 695.

A thesis proposal was written by graduate student [redacted] and submitted to the following committee members for review: Jennifer Dever, Christina Tzagarakis-Foster and Scott Nunes. The student was advised by the committee members and upon revision the proposal was accepted by each member.

A thesis proposal was written by graduate student [redacted] and submitted to the following committee members for review: Christina Tzagarakis-Foster, Mary Jane Niles and Juliet Spencer. The student was advised by the committee members and upon revision the proposal was accepted by each member.

A thesis proposal was written by graduate student [redacted] and submitted to the following committee members for review: Juliet Spencer, Christina Tzagarakis-Foster and Pat Schultz. The student was advised by the committee members and upon revision the proposal was accepted by each member.

[redacted] presented a research poster at the Keystone Meeting in Colorado this Spring. Sean Judge presented a research poster at the Keystone Meeting in Colorado this Spring. [redacted] submitted an abstract for Virology meeting in July. [redacted] gave a talk at the ASIH conference in June.

Outcome #2 [2A) Select and meet with graduate committee members. 2B) Conduct original research, demonstrating research skills within the specified research area and evaluate collected data.]

Assessment tools for this outcome
- Research performance – progress report, student evaluation form
- Directed Research (BIOL 698)
- Committee members assessment interview

Progress reports & student evaluation forms were submitted by each student and their major professor.

Second & third semester students were enrolled in BIOL 698.

Committee members met with students to assess their progress on their respective research project.

Outcome #3 [Prepare a written thesis to be reviewed and accepted by the graduate committee. The thesis will consist of the following sections: Introduction, Materials and Methods, Results, Discussion and References]

Assessment tools for this outcome
- Thesis Writing (BIOL 699)
- Thesis Outline
- Thesis
- Committee members assessment interview

Students in their final semester were enrolled in BIOL 699. Outlines and completed theses were submitted to committee members by these students.

Committee members Jennifer Dever, Christina Tzagarakis-Foster and David Saah met with [redacted] to discuss the thesis progress and provide feedback for revisions. They have accepted his thesis and rated it as “good”.

Outcome #4 [Present findings in a public format accepted by the graduate committee members.]
Assessment tools for this outcome
- Oral Presentation
- Exit Interview

☑️ presented his research findings to the department on May 13 as well as at a national conference in June.
☑️ An exit interview was conducted by the graduate chair for both ☐☐☐☐ (see attached documents).

b. What did the faculty in the department or program learn?
Summarize your findings and conclusions as a result of the assessment indicating strengths and weaknesses in student learning demonstrated by this assessment.

The department did not have sufficient time to discuss these findings; however the graduate committee was able to do so as well as each faculty member advising students (Jennifer Dever, Scott Nunes, John Sullivan, Christina Tzagarakis-Foster and Juliet Spencer). Students enrolled in the courses BIOL 600 (Seminar), 695 (Directed Readings), 698 (Directed Research) & 699 (Thesis Writing) each earned A’s for these courses exhibiting their strengths in learning in each area.

The student who has completed two semesters of the program has submitted her proposal to committee members who concluded that she had met outcome #1.

❖ earned an “Excellent” rating, his Research proposal submitted within the first year with clearly stated objectives; hypothesis highly supported by current literature. Research design is well defined and provides novel tests of problems. Proposal put forth relevant scientific questions that are highly significant to the field. Her strengths in completing tasks in a timely fashion and demonstrating a thorough understanding of her research project were exhibited.

Students conducting research also met outcome #2.

❖ demonstrated “Excellent Achievement”, having completed the following: Regular meetings held to discuss research design. Research conducted independently, standard methods mastered and student receives good progress reports regarding lab/research performance. Data generated and analyzed.

❖ each demonstrated “Good Achievement”, having completed the following: thesis committee formed, proposal submitted and accepted, standard methods mastered and student receives good progress reports regarding lab/research performance. Data generated and analyzed.

❖ demonstrated “Satisfactory Achievement”, he has not yet formed a thesis committee but his Research conducted independently, standard methods mastered and student receives good progress reports regarding lab/research performance. Data generated and analyzed.

Second year students met outcomes #3 & #4.

❖ met outcome #3 with a “Good” rating. Thesis outline submitted to graduate committee. Preliminary draft and final draft submitted to graduate committee submitted in a timely fashion. Regular meetings to discuss thesis progress with graduate committee held. Thesis complete including a comprehensive review of prior research; describes the research design; materials and methods used in the research; the findings in the described research; a summary of the findings with conclusions, implications for further research and significance of research. Thesis well written, error free and minimal revisions needed. All committee members highly satisfied. Portion of thesis submitted for publication. Final thesis approved by Graduate Chair.

❖ met outcome #4 with a “Excellent” rating - Thesis presentation is outstanding, student demonstrates an excellent ability to convey the research at both the scientific and general public level.
Audience able to grasp the significance of the research and how it adds to the current body of science in
the particular field. Data presented at a scientific meeting ASIH, (presentation) generating inquiry from
peers.

The graduate committee found that these assessment tools were adequate methods to measure the learning
outcomes for the students enrolled in our research-based graduate program. Each students’ thesis
committee members are able to advise students directly and assess their progress through each step: thesis
proposal, research, oral presentation and completed written thesis.

An exit interview was given to graduating student [redacted] [redacted] the results of this
interview it is clear that we are meeting our program goals.

c. What will be done differently as a result of what was learned?
Discuss how courses and/or curricula will be changed to improve student learning as a result of the
assessment. Include a discussion of how the faculty will help students overcome their weaknesses and
improve their strengths.

No curricula changes will be adopted next year.

3. Attach a copy of the components of the department/program assessment plan that have
been modified since its initial submission:
No documents have been modified since last year.
a. Program Mission
The Biology Master's degree program at the University of San Francisco is a research based program in which the student undertakes an active research project that culminates in a formal written thesis. A student who successfully completes the program will be well prepared to enter into a technical position in a related research or industrial laboratory or to continue further postgraduate work (e.g., Ph.D. or M.D.).

b & c. Program Learning Goals / Program Learning Outcomes
BIOLOGY GRADUATE PROGRAM GOALS, OUTCOMES & ASSESSMENT

<table>

*Students can choose from any of the upper division biology courses offered (or courses from other departments provided they directly relate to the thesis research). As these are primarily undergraduate courses, the graduate students will be required to complete extra work and in cases where exams are given, they will be expected to answer different questions in a more in-depth fashion.*
