Thank you for your continued support of our university.

We are excited about the opportunities ahead, including a new cohort of 2,071 incoming students, including 865 first-year students and 1,217 returning students. Many of our students are heading to USF this fall to continue their studies at our newly expanded Salvatierra Science Hill, where we’ve increased the size of our science space by 26,000 square feet, creating a more sustainable and advanced learning environment.

The dedicated community of students, faculty, and staff have spent the summer designing, building, and improving our campus. The university leadership and administration have also been working on initiatives to improve student outcomes and support services. We will continue to invest in diversity, equity, and inclusion efforts to reimagine Jesuit education.

Innovations in Teaching and Learning

The Creative Work of Our Faculty

The creative work of our faculty has helped us generate innovative academic programs and contributed significantly to our university's profile. This year, we will launch the Magis Fellows Program, which will provide development opportunities for our faculty members to advance their research and creative work.

As we enter the new academic year, we are poised to embark on an exciting journey to pursue lives and careers of ethical public service. We will continue to support and recruit students who are committed to making a positive impact on the world.

The Strategic Plan Advisory Council

The Strategic Plan Advisory Council will launch working groups to address key areas of our strategic plan. These working groups will focus on curricular transformation, student success, retention, and equity, as well as strategic planning, reporting, and sustainability. The goal of these working groups is to identify opportunities for improvement and to develop strategic plans for the future.

Thank you for your continued support of our university. We look forward to working together to build a path toward a sustainable and inclusive future.
